

## **EURO HYGIENE STATION**

The Euro hygiene handwash station is supplied with a Euro hoesetail adaptor.

This is designed to fit into the push-fit water inlet located at the base of the hygiene station and to provide a male coupling of ½" BSP thread. Once fitted this adaptor is designed to be a permanent fixture therefore **DO NOT** fit the Euro hoesetail adaptor into the inlet of the hygiene station until an isolation valve has been fitted to the thread on the euro hoesetail.
